

## **MASTER OF SCIENCE IN BIOCHEMISTRY CURRICULUM REVIEW**

The academic faculty in the department of biochemistry met on July 14<sup>th</sup> 2016 to review the MSc. Biochemistry program curriculum. The MSc. Biochemistry program has been offered since 1986 and is continually revised to make it relevant and has produced many biochemists who are recognized in academia and their fields of research in the country and internationally.

Such an event is informed by alignment of the existing program to provide a comprehensive coverage of the current major developments in the biomedical Sciences. In addition, the revised curriculum needs to be tailored to comply with the current market trends and industrial requirements.

The revised Master of Science program to be offered by the Department of Biochemistry will ultimately produce graduates who will continue to be highly sought after by academic, industrial and government agencies looking to hire the brightest and the best.
